DISCLAIMER

This whitepaper is provided for informational purposes only. It describes the GOOD IN THE HOOD project, the \$GOOD token, its structure, tokenomics, and current project objectives.

Nothing contained in this document constitutes financial, investment, legal, tax, or trading advice, nor should anything herein be interpreted as a recommendation or solicitation to purchase, sell, or hold \$GOOD or any other digital asset.

\$GOOD is a meme token. Digital assets, and meme tokens in particular, can be highly speculative and volatile. The market value of \$GOOD may increase, decrease substantially, or fall to zero. There is no guarantee of liquidity, market value, exchange availability, continued development, future functionality, or financial return.

Anyone interacting with \$GOOD is responsible for conducting their own research, evaluating the risks associated with digital assets, and determining whether acquiring, holding, transferring, or trading \$GOOD is permitted under the laws and regulations applicable to them.

1. EXECUTIVE SUMMARY

GOOD IN THE HOOD (\$GOOD) is a community-focused meme token deployed on Robinhood Chain. The project is built around a recognizable character, original creative content, meme culture, and community participation.

\$GOOD has a fixed maximum supply of 1,000,000,000 tokens, no additional issuance, and a 0% buy, sell, and transfer tax. Seventy percent of supply was allocated to the initial public presale, distribution and liquidity, while 30% was divided equally among Team, Marketing, and Community allocations. Those three project allocations were established through separate launchpad vesting pools and are directed, when claimable, to separate project Safe multisignature wallets.

Initial liquidity is held through a launchpad smart-contract structure that is immutable, and restricts project interaction with the underlying LP position to fee collection. The project discloses the applicable contract address so the architecture can be independently inspected.

GOOD IN THE HOOD is supported by Good In The Hood, LLC, a Colorado limited liability company. Ownership of \$GOOD does not represent equity, membership, profit participation, or ownership in Good In The Hood, LLC.

2. GOOD IN THE HOOD

\$GOOD is a community-focused meme token built around the GOOD IN THE HOOD brand and its central character - a streetwise, confident pit bull with his own style, attitude, and identity. He is the guardian of the hood, and every hood needs something \$GOOD.

\$GOOD embraces the culture that made meme coins a unique part of cryptocurrency: humor, artwork, community participation, social interaction, creativity, and the ability of people from around the world to rally around a shared character and idea.

There is no complicated protocol hidden behind \$GOOD.

\$GOOD is a meme token.

Its purpose is to provide the digital asset around which the GOOD IN THE HOOD community, brand, artwork, memes, and culture can develop.

3. WHAT IS \$GOOD?

\$GOOD is a fixed-supply meme token deployed on Robinhood Chain. The token was created primarily for entertainment, community participation, internet culture, and development of the broader GOOD IN THE HOOD brand and community.

\$GOOD does not represent:

- Equity or ownership in Good In The Hood, LLC;
- A membership interest in Good In The Hood, LLC;
- Debt owed by Good In The Hood, LLC or its members;
- A right to dividends or distributions;
- A contractual right to project revenue or profits;
- Ownership of project or LLC assets; or
- A guarantee of future utility, value, or financial return.

Holding \$GOOD means holding the \$GOOD digital token. It does not confer ownership of the company responsible for supporting the project.

4. BUILT ON ROBINHOOD CHAIN

\$GOOD was launched natively on Robinhood Chain. Robinhood Chain is an Ethereum-compatible Layer-2 environment designed to support EVM applications and smart contracts.

GOOD chose Robinhood Chain to participate early in a developing blockchain ecosystem while retaining compatibility with established Ethereum tooling and infrastructure.

GOOD IN THE HOOD is independently developed. Deployment on Robinhood Chain should not be interpreted as sponsorship, endorsement, approval, or a guarantee of the GOOD project by Robinhood.

5. THE GOOD COMMUNITY

GOOD IN THE HOOD is fundamentally a meme, brand, culture, and community project. The project intends to grow through original artwork, memes, social media, community interaction, collaborations, promotional campaigns, and participation within the Robinhood Chain ecosystem.

The GOOD character provides the project with a consistent visual identity around which that community can develop.

GOOD is loyal. GOOD is protective. GOOD is street smart.

The "hood" is not one neighborhood. It is every Discord. Every Telegram. Every X Space. Every meme. Every holder watching the chart late at night. Every person who has taken a loss, celebrated a win, survived the trenches, and still showed up the next day.

GOOD is not royalty. He is not a billionaire. He is not trying to be a superhero.

He is the toughest dog in crypto - and every hood needs something GOOD.

6. OFFICIAL \$GOOD CONTRACT

Field	Value
Token	GOOD IN THE HOOD
Symbol	\$GOOD
Network	Robinhood Chain
Maximum Supply	1,000,000,000 GOOD
Official Contract	0x5f62c57e5c537887117eef828b7e3ad41c009feb

7. TOKENOMICS

\$GOOD was designed with straightforward tokenomics: a fixed one-billion-token maximum supply, no additional issuance, and no token transaction tax.

Metric	Value
Maximum Supply	1,000,000,000 GOOD
Additional Issuance	None
Buy Tax	0%
Sell Tax	0%
Transfer Tax	0%

Allocation	Percentage	Tokens	Purpose
Initial Contributor Distribution	35%	350,000,000	Initial public fair-launch pre-sale
Initial Liquidity Pool	35%	350,000,000	Initial public launch and liquidity
Project - Team	10%	100,000,000	Project team; subject to vesting
Project - Marketing	10%	100,000,000	Marketing, promotion, awareness, collaborations, listings and brand development; subject to vesting
Project - Community	10%	100,000,000	Community initiatives, campaigns, incentives, events and participation; subject to vesting

8. VESTING

The 30% project allocation was not made immediately available to the development team at launch. The Team, Marketing, and Community allocations were established as three separate vesting pools through the launchpad, locked by Sablier, and each with its own linear release schedule.

Allocation	Tokens	Vesting Start	Vesting Duration	Release Structure
Team	100,000,000	Migration + 1 week	3 Months	Linear
Marketing	100,000,000	Migration + 24 hours	1 week	Linear
Community	100,000,000	Migration + 24 hours	3 Months	Linear

The launchpad currently publishes the applicable allocation and vesting information through the GOOD IN THE HOOD project page. <https://token.select/project/0x5f62c57e5c537887117eef828b7e3ad41c009feb>

9. MULTISIGNATURE CUSTODY

Vesting represents the first layer of control over the three project allocations. Multisignature Safe wallet custody represents a second.

When tokens from the Team, Marketing, and Community vesting allocations become claimable, they can only be transferred to their corresponding designated project Safe multisignature wallet. This maintains separation between project allocations and avoids management of the entire project allocation through a single ordinary wallet. Each Safe wallet transaction requires a 2 of 5 signing threshold for execution. This ratio allows for project security but also expedience of functionality with project transactions.

Allocation	Allocation Size	Designated Safe Multisig
Team	10% / 100,000,000 GOOD	0x8eCe0ab012B2e60400cF9e00889B2649Aa2309e2
Marketing	10% / 100,000,000 GOOD	0xDdBFEb74fD4205b3c617b16679495A2A73c82E618
Community	10% / 100,000,000 GOOD	0xF9e57dd0315109917f815507521c9602B8f68B7f

9.1 VESTING VS. MULTISIGNATURE CUSTODY

Vesting controls when tokens become available. Multisignature custody controls how vested project tokens are subsequently managed.

Once vested tokens have been claimed into their designated Safe, they should not be described as continuing to be locked merely because they are held by a multisignature wallet. They become project-controlled tokens whose movement requires the authorization established by the applicable Safe configuration.

Multisignature custody provides an additional operational safeguard, but it does not make vested tokens permanently inaccessible.

10. PERMANENTLY LOCKED LIQUIDITY

\$GOOD's initial liquidity was established through the project's launchpad and is intended to remain permanently locked.

According to the launchpad architecture and information supplied to the project, the liquidity position is held through an immutable smart-contract structure whose callable project functionality is limited to collecting fees generated by the position. The project has been advised by Token.Select that the contract provides no mechanism to withdraw or relocate the underlying LP position and no upgrade path through which additional LP-management functionality can later be introduced.

Accordingly, the project understands the underlying liquidity position to be locked for the life of the position. The fee-collection function does not, by itself, represent a withdrawal of the underlying LP position.

Field	Value
Liquidity-Lock Contract	0xE0FEC59Ca8d006Fc6D544e50292db4390a558391
Explorer	https://robinhoodchain.blockscout.com/address/0xE0FEC59Ca8d006Fc6D544e50292db4390a558391?tab=write_contract

The contract is publicly visible on Robinhood Chain so technically capable community members and third parties can independently inspect the contract interface and deployed code.

Permanent locking of the initial LP position does not guarantee a particular token price, trading volume, market depth, or future level of liquidity.

11. DEVELOPMENT & LEGAL ENTITY

GOOD IN THE HOOD and the \$GOOD project are developed and supported by a United States-based development team operating through:

Good In The Hood, LLC
A Colorado Limited Liability Company
Colorado, United States of America

Good In The Hood, LLC supports project development, administration, branding, marketing, community initiatives, and ongoing operations associated with GOOD IN THE HOOD.

The existence of a legal development entity does not change the nature of the \$GOOD token. Acquiring or holding \$GOOD does not make a holder a member, shareholder, partner, owner, creditor, or other equity holder of Good In The Hood, LLC.

- Equity in Good In The Hood, LLC;
- Membership interests in the LLC;
- Ownership of LLC assets;
- Dividends;
- Revenue sharing;
- Contractual distributions of company profits; or
- Voting rights concerning the internal management of Good In The Hood, LLC.

Good In The Hood, LLC and the \$GOOD token are distinct.

12. PROJECT DIRECTION

GOOD IN THE HOOD does not publish a rigid multi-year roadmap promising specific valuations, exchange listings, partnerships, utilities, or financial outcomes. **Instead, GOOD intends to develop organically alongside its community and the Robinhood Chain ecosystem.**

Focus Area	Direction
Community Growth	Expand and strengthen the GOOD community.
Content & Memes	Develop original GOOD IN THE HOOD artwork, memes, media and digital content.
Robinhood Chain Ecosystem	Participate in the developing Robinhood Chain ecosystem.
Marketing & Awareness	Expand awareness through community-driven and project-supported marketing.
Collaborations	Explore appropriate relationships with creators, communities, platforms, projects and organizations.
Market Accessibility	Pursue opportunities to make \$GOOD more accessible where appropriate and feasible.
Brand Development	Continue establishing GOOD IN THE HOOD as a recognizable digital brand.

These areas represent objectives rather than contractual commitments. No particular initiative, partnership, exchange listing, integration, feature, or development milestone is guaranteed.

13. TRANSPARENCY

GOOD IN THE HOOD believes a meme token can be simple without being opaque. The project therefore seeks to make its fundamental structure understandable and independently verifiable wherever practical.

Transparency cannot eliminate the risks inherent in cryptocurrency. It provides information so participants can evaluate those risks for themselves.

13.1 INTEGRITY & INDEPENDENT VERIFICATION

The GOOD IN THE HOOD development team voluntarily elected to complete **Know Your Customer (KYC) verification through Cyberscope**. This additional step was undertaken to provide an independent identity-verification layer behind the project while allowing individual team members to maintain reasonable privacy from the general public. KYC verification does not eliminate project or market risk, but it provides an additional measure of accountability by establishing that the individuals behind the project have been independently identified and verified.

The \$GOOD token smart contract is also undergoing an **independent security audit through Cyberscope**. The audit is currently in progress and has not yet been finalized. Once completed, the project intends to make the final audit report publicly available through its official verification resources. An

audit can identify known contract risks and characteristics at the time of review, but should not be interpreted as a guarantee that a smart contract or token is free from all vulnerabilities or risks.

15. RISK DISCLOSURE

\$GOOD is a meme token and should be treated as a highly speculative digital asset. Anyone interacting with \$GOOD should understand that cryptocurrency markets can be extremely volatile and unpredictable.

15.1 MARKET RISK

The market value of \$GOOD is determined by market activity and may fluctuate substantially. There is no guaranteed minimum value. The market price could decline substantially or reach zero.

15.2 LIQUIDITY RISK

Permanent locking of an initial liquidity position does not guarantee that sufficient market liquidity, trading volume, buyers, sellers, or market depth will exist in the future.

15.3 MEME TOKEN RISK

Meme tokens can be particularly sensitive to social sentiment, community participation, trends, attention, speculation, and broader cryptocurrency-market conditions. Interest can increase or disappear rapidly.

15.4 BLOCKCHAIN RISK

\$GOOD operates on Robinhood Chain and is exposed to risks associated with blockchain networks, smart contracts, wallets, bridges, infrastructure providers, software vulnerabilities, network interruptions, and other technical systems.

15.5 SMART CONTRACT RISK

Smart contracts may contain unknown vulnerabilities or may interact with external contracts and infrastructure in unexpected ways.

15.6 REGULATORY RISK

Laws and regulations concerning cryptocurrencies and meme tokens continue to evolve and vary between jurisdictions. Future legal or regulatory developments may affect the availability, trading, transfer, promotion, taxation, or use of \$GOOD.

15.7 THIRD-PARTY RISK

Wallets, decentralized exchanges, centralized exchanges, launchpads, blockchain explorers, bridges, websites, social networks, and other third-party services are outside the direct control of Good In The Hood, LLC.

15.8 PROJECT RISK

There is no guarantee that GOOD IN THE HOOD will achieve its development, branding, marketing, community, collaboration, or accessibility objectives. The project may modify, postpone, discontinue, or replace particular initiatives as circumstances evolve.

16. NO GUARANTEED RETURN OR VALUE

\$GOOD carries no promise or guarantee of financial return. Neither Good In The Hood, LLC nor the GOOD IN THE HOOD development team guarantees:

- An increase in the market price of \$GOOD;
- Maintenance of any particular market capitalization;
- Profit to token holders;
- Continued market liquidity;
- Exchange listings;
- Particular trading volumes;
- Future partnerships;
- Future utility;
- Continued availability of third-party services; or
- Achievement of project objectives.

Anyone choosing to acquire or interact with \$GOOD should independently evaluate the risks involved. Past performance of other meme coins, cryptocurrencies, blockchain networks, or digital assets is not an indication or guarantee of the future performance of \$GOOD.

17. NO FINANCIAL, LEGAL, OR TAX ADVICE

Nothing published by GOOD IN THE HOOD, Good In The Hood, LLC, its development team, or members of its community should be interpreted as individualized financial, investment, legal, or tax advice unless expressly provided by a separately engaged and appropriately qualified professional acting in that professional capacity.

Individuals are responsible for conducting their own research and obtaining independent professional advice when appropriate. Cryptocurrency laws, regulations, and tax treatment vary by jurisdiction. Each participant is responsible for determining whether acquiring, holding, transferring, using, or selling \$GOOD is lawful and appropriate in their jurisdiction.

18. THE GOOD PHILOSOPHY

GOOD IN THE HOOD does not need to pretend to be something it is not.

It began with a character.

It became a meme.

The meme became a token.

And around that token, a community can grow.

We believe that honesty, integrity, and transparency matter even when the project is built around humor and internet culture.

That is why \$GOOD was structured around a fixed one-billion-token supply, zero transaction taxes, publicly disclosed allocations, launchpad vesting, separate multisignature project wallets, and permanently locked initial liquidity.

None of those things guarantee success. They explain how \$GOOD was built.

From here, GOOD IN THE HOOD will focus on its character, its community, its culture, and its place within the Robinhood Chain ecosystem.

Stay loyal.
Stay \$GOOD.
